Dear Maury,

As President of Fleetwood Limousine of Los Angeles as well as President of the Greater California Limousine Association, I find it necessary that we examine as many new products as possible to help reduce our operating costs in this stressful economic period while continuing to offer competitive pricing to our clients. Just as importantly, the transportation industry needs to continue to evaluate products that reduce harmful CO2 carbon emissions.

Fuel is a fluctuating cost that continues to impact our bottom line. In California, we pay the highest price for fuel in the United States. It was a great relief when we found a fuel savings device that actually works and will save our company money, while also reducing the above mentioned harmful CO2 carbon emissions. We have reviewed our fuel bills for the last 5,000 miles on each tested vehicle and have found that cars equipped with the FUELMiser are realizing an average of a 10% increase in MPG in comparison to MPG on those same vehicles pre-installation of the FUELMiser product. A 10% increase in m.p.g. equates to a 10% decrease in our fuel bills, which could not come at a better time considering our economy and the cost of fuel.

With a fleet of 24 vehicles, that savings is significant. The FUELMiser unit pays for itself within 90 days so our return on investment becomes quite significant.

As President of Fleetwood Limousine and the GCLA, I cannot see why any limousine or fleet owner, from one vehicle on up, would not utilize FUELMiser as a part of their standard equipment. It certainly is in my fleet.

A handwritten signature in black ink, appearing to be 'John', with a long, sweeping underline that extends to the right and then curves back down.
