Dear Fellow Tow Companies

The Fuel Miser has been economically beneficial to our company. We build and sell tow trucks and we also have a fleet of 12 tow trucks that we use as an Independent Contract Station with the Automobile Club of Southern California. One specific truck runs about 28,000 miles per year, and there was an increase of .5 miles per gallon. Even with the low miles this truck travels each year, that saves us in diesel fuel \$425 over a one year period. As we continue to implement the Fuel Miser into our fleet, we will save on average \$5,100 per year for our original investment. The Fuel Miser works and we saw a return on investment within less than 3 months on a truck that doesn't travel that many miles per year.

This is a must have product for any vehicle owner especially if you have a large fleet of trucks. Our president is also pleased about continuing to go "green."
